Warning

1. This Kyocera LCD module has been specifically designed for use only in electronic devices and industrial machines in the area of audio control, office automation, industrial control, home appliances, etc. The module should not be used in applications where the highest level of safety and reliability are required and module failure or malfunction of such module results in physical harm or loss of life, as well as enormous damage or loss. Such fields of applications include, without limitation, medical, aerospace, communications infrastructure, atomic energy control. Kyocera expressly disclaims any and all liability resulting in any way to the use of the module in such applications.

2. Customer agrees to indemnify, defend and hold Kyocera harmless from and against any and all actions, claims, damages, liabilities, awards, costs, and expenses, including legal expenses, resulting from or arising out of Customer's use, or sale for use, or Kyocera modules in applications.

Caution

1. Kyocera shall have the right, which Customer hereby acknowledges, to immediately scrap or destroy tooling for Kyocera modules for which no Purchase Orders have been received from the Customer in a two-year period.

1. Application

This document defines the specification of TCG062HVLDA-G20. （RoHS Compliant）

2. Construction and outline

LCD	: Transmissive color dot matrix type TFT
Backlight system	: LED
Polarizer	: Glare treatment
Additional circuit	: Timing controller, Power supply (3.3V input)
	(with constant current circuit for LED Backlight)

3. Mechanical specifications

Item	Specification	Unit
Outline dimensions　1)	173(W)×70(H)×6.7(D)	mm
Active area	147.84(W)×55.44(H) (15.8cm/6.2 inch(Diagonal))	mm
Effective viewing area	149.8(W)×57.4(H)	mm
Dot format	640×(B,G,R)(W)×240(H)	dot
Dot pitch	0.077(W)×0.231(H)	mm
Base color　　　　2)	Normally White	-
Mass	105	g

1) Projection not included. Please refer to outline for details.

2) Due to the characteristics of the LCD material, the color varies with environmental temperature.

Storage humidity 3)	H_{STO}	10	4)	%RH
Vibration	-	5)	5)	-
Shock	-	6)	6)	-

1) Operating temperature means a temperature which operation shall be guaranteed. Since display
    performance is evaluated at 25°C, another temperature range should be confirmed.
2) Temp. = -30°C   48h , Temp. = 80°C   168h
    Store LCD at normal temperature/humidity.   Keep them free from vibration and shock.
    An LCD that is kept at a low or a high temperature for a long time can be defective due to
    other conditions, even if the low or high temperature satisfies the standard.
    (Please refer to "Precautions for Use" for details.)

3) Non-condensing
4) Temp.   40°C, 85%RH Max.
    Temp.   40°C, Absolute humidity shall be less than 85%RH at 40°C.
5)

Frequency	10 55 Hz	Acceleration value
Vibration width	0.15mm	(0.3 9 m/s^2)
Interval	10-55-10 Hz minutes	

    2 hours in each direction X, Y, Z (6 hours total)

1) The horizontal display start timing is settled in accordance with a rising timing of ENAB signal.
   In case ENAB is fixed "Low", the horizontal start timing is determined.
   Don't keep ENAB "High" during operation.

1) When ENAB is fixed at "Low", the display starts from the data of C104(clock) as shown in 8-5.
2) The horizontal display position is determined by ENAB signal.

8-3. Vertical display position

1) The vertical display position (TVs) is 34th line.
2) ENAB signal is independent of vertical display position.

Operating life　　3)　4)	T	-	40,000	-	h	IF=15mA, Ta=25

1) For each LED.
2) A forward current below 5.0mA may reduce the brightness uniformity of the LED backlight.
   This is because the amount of light from each LED chip is different. Therefore, please evaluate carefully
   before finalizing the input current.
3) When brightness decrease 50% of minimum brightness.
   The average life of a LED will decrease when the LCD is operating at higher temperatures.
4) Life time is estimated data. (Condition : IF=15mA, Ta=25　in chamber).
5) When you start-up, please charge in sequence of V$_{IN}$B->BLEN, or VBRT. When you shut-down, please
   stop in sequence of BLEN and/or VBRT->V$_{IN}$B.
6) Please do not connect the other than our backlight to this output connector on the PCB.
7) In case V$_{DD}$ and V$_{IN}$B are supplied by a single power source, V$_{DD}$ & V$_{IN}$B, and GND are connected
   directly and separately from the output on the power source. If the common wire are used for V$_{DD}$ &
   V$_{IN}$B, and for GND, and are split near the PCB, and connect to each LCD driving circuit and backlight
   driving circuit, a flicker might be occurred due to a ripple between the both circuit.

11. Warranty

11-1. Incoming inspection

Please inspect the LCD within one month after your receipt.

11-2. Production warranty

Kyocera warrants its LCD's for a period of 12 months from the ship date. Kyocera shall, by mutual agreement, replace or re-work defective LCD's that are shown to be Kyocera's responsibility.

12. Precautions for use

12-1. Installation of the LCD
1) A transparent protection plate shall be added to protect the LCD and its polarizer
2) The LCD shall be installed so that there is no pressure on the LSI chips.
3) The LCD shall be installed flat, without twisting or bending.
4) Please design the housing window so that its edges are between the active area and the effective area of the LCD screen.
5) A transparent protection sheet is attached to the polarizer. Please remove the protection film slowly before use, paying attention to static electricity.

12-2. Static electricity
1) Since CMOS ICs are mounted directly onto the LCD glass, protection from static electricity is required.
2) Workers should use body grounding. Operator should wear ground straps.

12-3. LCD operation
1) The LCD shall be operated within the limits specified. Operation at values outside of these limits may shorten life, and/or harm display images.

12-4. Storage
1) The LCD shall be stored within the temperature and humidity limits specified. Store in a dark area, and protect the LCD from direct sunlight or fluorescent light.
2) Always store the LCD so that it is free from external pressure onto it.

12-5. Usage
1) DO NOT store in a high humidity environment for extended periods. Polarizer degradation bubbles, and/or peeling off of the polarizer may result.
2) The front polarizer is easily scratched or damaged. Prevent touching it with any hard material, and from being pushed or rubbed.
3) The LCD screen may be cleaned by wiping the screen surface with a soft cloth or cotton pad using a little Ethanol.
4) Water may cause damage or discoloration of the polarizer. Clean condensation or moisture from any source immediately.
5) Always keep the LCD free from condensation during testing. Condensation may permanently spot or stain the polarizer.
6) Do not disassemble LCD because it will result in damage.
7) This Kyocera LCD has been specifically designed for use in general electronic devices, but not for use in a special environment such as usage in an active gas. Hence, when the LCD is supposed to be used in a special environment, evaluate the LCD thoroughly beforehand and do not expose the LCD to chemicals such as an active gas.
8) Please do not use solid-base image pattern for long hours because a temporary afterimage may appear. We recommend using screen saver etc. in cases where a solid-base image pattern must be used.
9) Liquid crystal may leak when the LCD is broken. Be careful not to let the fluid go into your eyes and mouth. In the case the fluid touches your body; rinse it off right away with water and soap.

13. Reliability test data

Test item	Test condition	Test time	Judgement	
High temp. atmosphere	80°C	240h	Display function Display quality Current consumption	: No defect : No defect : No defect
Low temp. atmosphere	-30°C	240h	Display function Display quality Current consumption	: No defect : No defect : No defect
High temp. humidity atmosphere	40°C 90% RH	240h	Display function Display quality Current consumption	: No defect : No defect : No defect
Temp. cycle	-30°C　0.5h R.T.　0.5h 80°C　0.5h	10cycles	Display function Display quality Current consumption	: No defect : No defect : No defect
High temp. operation	70°C	500h	Display function Display quality Current consumption	: No defect : No defect : No defect

1) Each test item uses a test LCD only once. The tested LCD is not used in any other tests.

2) The LCD is tested in circumstances in which there is no condensation.

3) The reliability test is not an out-going inspection.

4) The result of the reliability test is for your reference purpose only.
 The reliability test is conducted only to examine the LCD's capability.

Inspection conditions 　Luminance　　　　　　　: 500 Lux min. 　Inspection distance　　　: 300 mm. 　Temperature　　　　　　: 25 ± 5 　Direction　　　　　　　: Directly above

Definition of inspection item	Dot defect	Bright dot defect	The dot is constantly "on" when power applied to the LCD, even when all "Black" data sent to the screen. Inspection tool: 5% Transparency neutral density filter. Count dot: If the dot is visible through the filter. Don't count dot: If the dot is not visible through the filter.
		Black dot defect	The dot is constantly "off" when power applied to the LCD, even when all "White" data sent to the screen.
		Adjacent dot	Adjacent dot defect is defined as two or more bright dot defects or black dot defects.
	External inspection	Bubble, Scratch, Foreign particle (Polarizer, Cell, Backlight)	Visible operating (all pixels "Black" or "White") and non operating.
		Appearance inspection	Does not satisfy the value at the spec.
	Others	LED wires	Damaged to the LED wires, connector, pin, functional failure or appearance failure.
	Definition of size	Definition of circle size　　　　Definition of linear size ( )/2
